Reactor

Do you have what it takes to push the reactor over the edge and win the JACKPOT???

Reactor, by Family Fun Companies, adds a different twist to the normal "quick-coin" game by demanding each player to "bounce" his coin through the openings of the spinning center column. That's right...you have to BOUNCE your coin to set off the reactor!!!

As you and the other two players bounce your coins thru the openings, the column begins to spin faster and the amount of tickets you win increases as well. Be the first to bounce your coin thru the slot when the reactor reaches its meltdown point to win the JACKPOT!!!

The action is quick and exciting, and the payoff is high for the player who masters his coin bouncing skills! Reactor from Family Fun Companies will have your customers "bouncing" their way to your prize counter...

Reactor measures 47.25" W x 43.3" D x 85.9" H and weighs 475 lbs.

Shipping dimensions are 50" D x 50" W x 80" H and 510 lbs.
